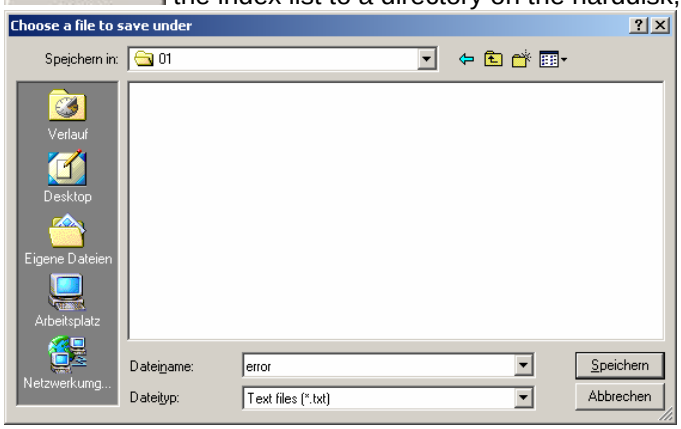
27 03PB 12-04-07 10:34:33 See detailed LOG or docu of FU mA a

Save the index list to a directory on the harddisk, the default file name is **error.txt**.



To get the details one can doubleclick an individual line.

In case one wants to get the details of more than one error it is more convenient to mark all lines of interest either starting at a certain line and then move the mouse up or down
or
hold the <CTRL> key and select individual errors from the index list:

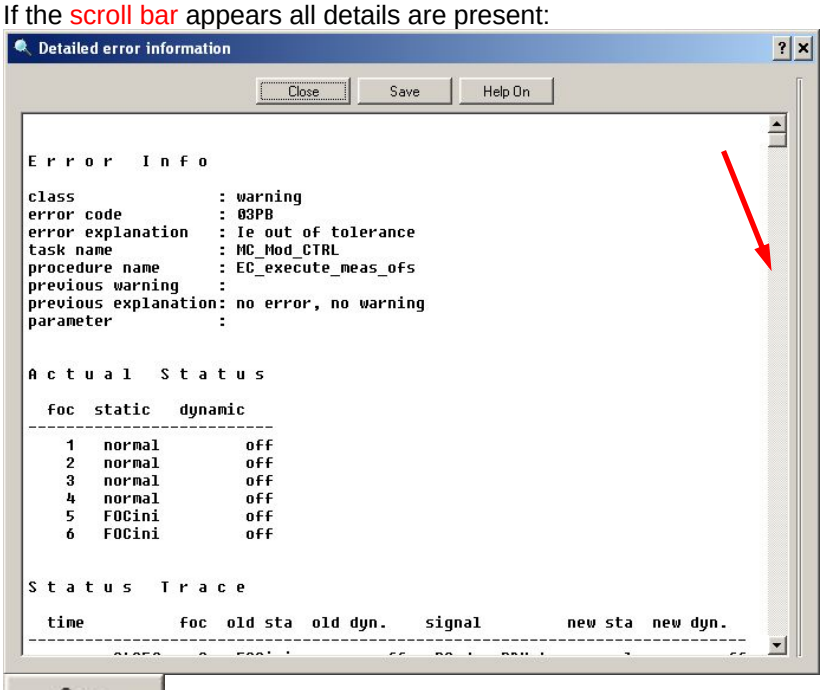
After marking hit

.
If all 50 (38) error lines release 3.x Optimus RAD – R/F or release 1.x Optimus C (release 2.x Optimus RAD) have been marked it might take about 20 (15) minutes before all details are present.

If the scroll bar appears all details are present:



the screen as **details.txt**.
